OREGON AND CHINESE WHEAT.—Just

season 45 to 50 bushels of wheat per acre, weighing 63 to 68 lbs. per bushel.

"Oregon and China wheat.—There have been left at our office two new species of wheat.—one called 'Oregon,' the other 'China.' It was taken from the Bloomfield estate, belonging to Henry R. Smeltzer, near Middletown, Frederick county, Maryland. The 'Oregon' wheat was found or discovered by a missionary travelling through that territory, who breught it to this country in 1839. Mr. Smeltzer, this year raised from four and a quarter acres, 212 bushels and 43 lbs., which is a fraction over 50 bushels to the acre. This wheat is very hardy, of a beautiful red color, with smooth chaff, heads from 5 to 6 inches long, and average from 90 to 130 grains to the head. It is believed it will yield at least 20 per cent. more to the acre than the ordinary 5 to 6 inches long, and average from 90 to 13 grains to the head. It is believed it will yield at least 20 per cent. more to the acre than the ordinary wheat, from the fact that it has from 15 to 20 grains more to the head. The history of the China wheat is rather singular. A few heads were found in a box of China-ware imported from the north of China; and the heads being so very large and compact the discoverer was induced to plant them. Mr. S informs us that last year he raised 42j bushels per acre with it, and this year 47 bushels per acre. This is a beautiful white wheat, and has heads or ear about as long as the 'Oregon' wheat, and sheat the same number of grains to the head. The 'China wheat is of the early kind, and, so far, has not beer injured by smut, mildew, or fly."—Sun.
